

02 Course: Diagnostics, Infection Control and Sterilization

Modality: Self-Paced Learning

Duration:

The Diagnostics, Infection Control and Sterilization course is designed to provide students with an in-depth understanding of the principles and practices related to infection control and sterilization in healthcare settings. Students will learn about the different types of diagnostic tests used in healthcare, including laboratory tests and imaging studies, and how to interpret their results. They will also learn about the various methods used for infection control and sterilization, such as hand hygiene, disinfection, and sterilization of medical equipment. This course will equip students with the knowledge and skills necessary to prevent the spread of infectious diseases in healthcare settings, and maintain a safe and sterile environment for patients and healthcare workers.
