

05 Course: Surgical Techniques and Considerations

Modality: Self-Paced Learning

Duration:

The Surgical Techniques and Considerations course is designed to provide students with a thorough understanding of the principles and practices of surgery. Students will learn about the various surgical techniques used in different surgical specialties, including minimally invasive and robotic-assisted surgery. They will also learn about considerations for surgical patients, such as preoperative evaluation, anesthesia management, and postoperative care. In addition, students will gain insight into the ethical and legal issues related to surgery, and the importance of effective communication and teamwork in the surgical setting. This course will prepare students for a career in surgical medicine and equip them with the skills necessary to provide safe and effective surgical care.
