# Course 3 - Overview of SimChart for the Medical Office

**Modality: Self-Paced Learning**

**Duration:**

SimChart for the Medical Office is a comprehensive electronic health record (EHR) simulation platform designed to provide students with hands-on experience in using electronic health records within a medical office setting. This platform offers a realistic and interactive environment where students can practice key tasks and workflows commonly performed in medical offices, including patient scheduling, documentation, billing, and coding.
